DATA SOLUTIONS

DATA IS KNOWLEDGE.
YOU KNOW HOW TO USE IT. WE KNOW
HOW TO EXTRACT IT.

- Make better decisions thanks to processing and analysing data in just the right time for business.
- Transform data into information, acquire knowledge and perform actions leading to building and strengthening your competitive advantage.
- Automate processes and focus on development, not just on maintenance.
- Measure and monitor the effectiveness of activities to ensure continuous assessment of their condition.

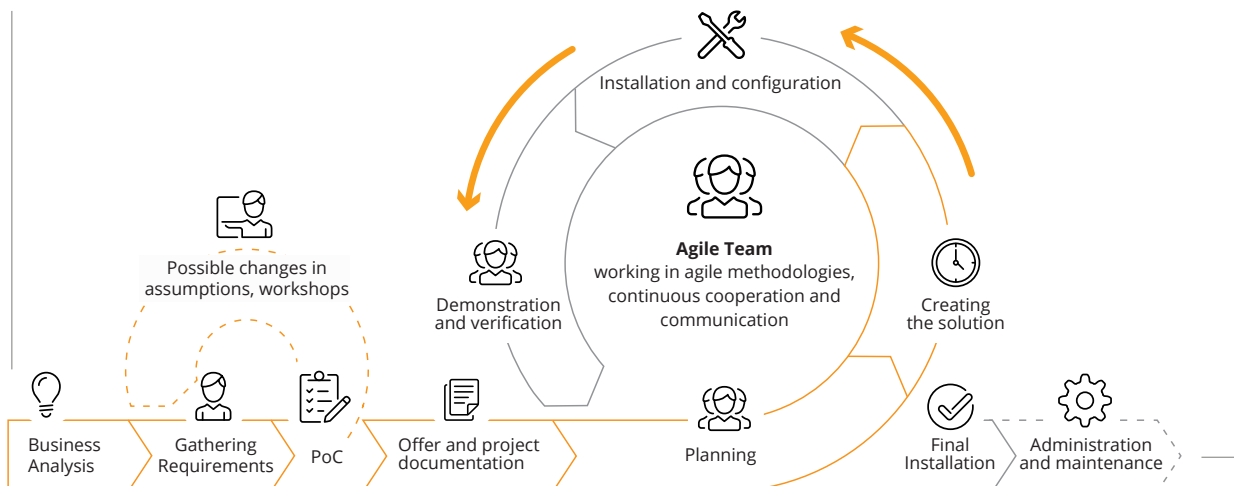

Data Solutions Services at Future Processing:

- Analysis and design of data collection and processing systems.
- Construction of reporting platforms adapted to individual needs.
- Creating complex solutions - from design to implementation.
- Business solutions in the cloud, on-premise and hybrid.
- Installation and administration of database environments.
- Agile project management.
- Training for users.
- Support and maintenance.

WE BUILD SOLUTIONS WITH PASSION

At Future Processing, we believe that agile methodologies of IT project management are the key to our clients' business success. We put a particular emphasis on the initial stage of analysis and collection of requirements. This allows to adjust the range of services to the individual, precisely defined expectations of your company. Iterative approach and continuous cooperation combined with clear communication guarantee achieving the results you expect.

WHAT CAN WE DO FOR YOU

BUSINESS ANALYSIS

Thanks to the phase of business analysis, the ideas and needs of our clients are thoroughly verified by experts, so that these concepts can then be turned into the best possible solutions, suited to real business needs.

- We analyse and advise on how to extract value from data.
- We design analytical platforms.
- We create and implement procedures that collect and process data.
- We solve problems and transform abstract concepts into tangible business solutions with the use of technology.
- We implement changes in the organization and train users.

BIG DATA

The reality leaves no doubt - the amount of data that all of us generate is constantly increasing. Thanks to Future Processing's Big Data technology services, we allow you to take full advantage of the potential related to effective analysis and use of information hidden in large data sets.

- We cumulate and process large data sets.
- We analyse streams of data and extract business value from it.
- We transform data into knowledge, providing up-to-date information in real time.
- We provide reliable results of data analysis that allow you to make more informed and data-driven decisions.

BUSINESS INTELLIGENCE

Data contains priceless knowledge that you can now have at your fingertips. Thanks to our solutions in the field of Business Intelligence, we help to visualize data, analyse it, draw conclusions and predict events. From now on, your decisions will be based on the knowledge derived from data.

- We design and create dashboards and other advanced reporting platforms for managers.
- We implement projects that create and maintain data warehouses.
- We provide solutions of collecting and processing data for visualizations.
- We analyse data sources and structures, creating legible and understandable data models for analysis.
- We make monitoring and analysis an element of every process.

MACHINE LEARNING

We deliver innovative solutions that allow to extract from the data more knowledge than ever. The use of Machine Learning technology introduces a certain level, depth and extend of analysis that is unachievable for any other methods.

- We create advanced detection, prediction and recommendation systems.
- We allow to achieve business goals where traditional solutions fail.
- We harness the latest accomplishments in the field of Machine Learning and Artificial Intelligence, so that the analysis of data brings the greatest possible benefits.

INTEGRATION

Data integration is a synonym of unrestricted access to reliable and up-to-date information about the condition of the company. Thanks to this, your organisation achieves operational flexibility and reduces costs.

- We integrate systems in organizations so that the data is prepared for efficient use.
- We migrate data between systems, ensuring data cleaning and improvement of quality.
- We ensure an effortless exchange of knowledge within the organization by creating consistent data sources.

ADMINISTRATION

By entrusting administration to experts, you ensure data security and compliance with applicable regulations. Save money and reduce the need to invest in new hardware and licenses to a minimum.

- We administer database environments ensuring their availability, performance and security.
- We optimize the operation of both software and hardware layers, contributing to the acceleration of development of technical and business processes in your organisation.
- We increase the efficiency of database environments, helping to reduce costs of unnecessary software, processes and equipment.
- We carry out audits and implement personalized solutions for companies.

DATA PROCESSING APPLICATIONS

Sometimes you may find yourself in the position where available, ready-made software solutions do not meet the needs of your company, especially in the field of data processing. In such situations, you should go for custom made applications that are tailored to your needs.

- We create web, mobile and desktop applications and provide high quality, performance and security of these solutions.
- Our teams of engineers and specialists work in agile methodologies, providing top-notch solutions that meet customer expectations.
- We deliver solutions based on embedded technologies tailored to industrial requirements.

WHO WE ARE

Future Processing is an experienced software company founded in 2000. We specialize in creating high quality innovative solutions for companies operating in various market sectors around the world.

We work for organisations, for which data bases are an essential tool in everyday work, in order to better harness software and hardware solutions and to accelerate business and technical processes.
