With our 21 years of experience in **delivery of successful IT projects** we will **help you achieve your business goals** with cutting edge technology.

Working on an IT project for your organisation or planning one? If the answer is yes, then now is the time to adapt to the ever-changing digital market.

Meeting our customers' needs we've prepared a set of services that **will help your company achieve business goals through creating an IT strategy**, getting a detailed technical roadmap, building and testing projects' prototype with end-users and ensuring the highest efficiency of existing solutions.

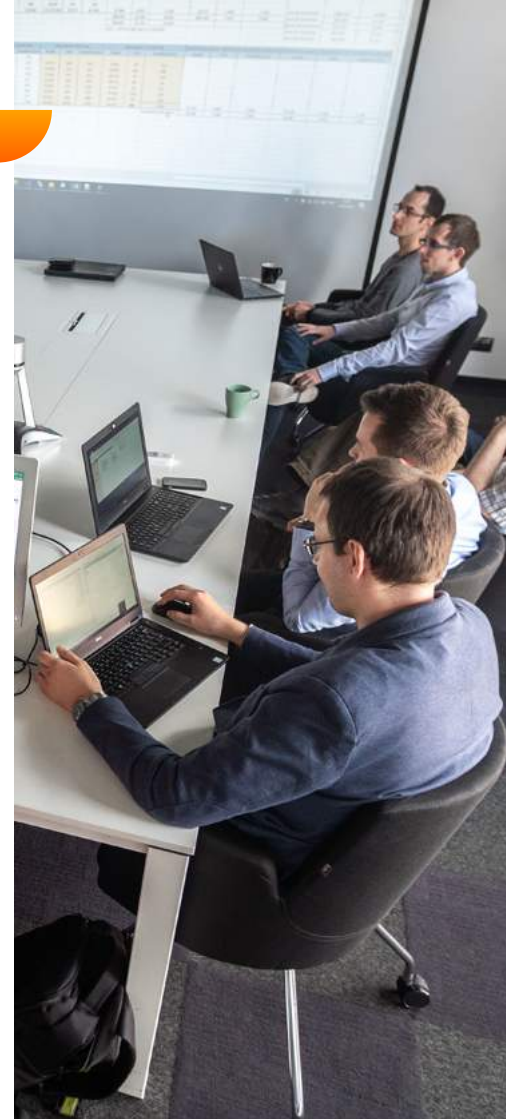

Do you **know that...**

39% of all failed IT projects in the world fail because of **bad requirements**

We believe that the success of IT projects is strictly related to business goals and users' needs. It is why creating, together with your company's key stakeholders, a proper, well thought through strategy and roadmap for developing products is so important. It is backed by the fact that... ↓

77% of projects at "champion" organisations have actively engaged **project executives**

We will help you to define your business goals and create a strategy that will lead you through the process of turning the vision into a successful, measurable output.

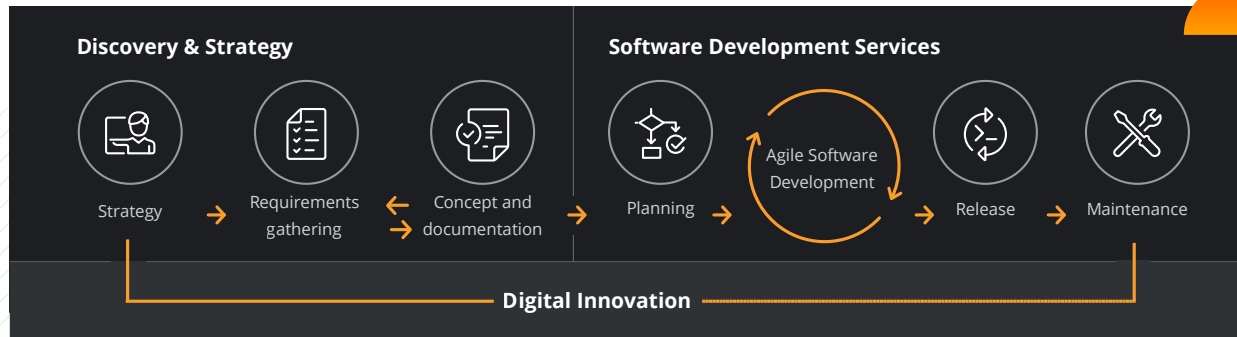

When is the right time to use our services?

The sooner the better, as engaging our specialists in the early stages will result in delivering more effective and efficient solutions.

Has your project already moved to a later phase?

It is not too late to join forces with us to make sure your final product perfectly answers to all your and customers' expectations.

PROJECT LIFE PHASES

IT Strategy Workshop

Take part in a brief, **constructive workshop for decision makers** and create a specialised IT strategy to achieve your business goals.

A highly intensive workshop aimed at **creating your IT strategy, finding solutions regarding your product or service or planning your organisation's digital transformation**. All this through thorough analysis of your company's business needs, industry trends as well as identifying key pain points and opportunities.

Its outcomes are **recommendations of possible solutions**, perfectly tailored to your company, along with high-level strategy on how to deliver it.

The IT Strategy Workshop is based on **small group discussions, brainstorming and interactive exercises**.

Understanding client's main challenges as well as planning IT projects **accordingly to business goals and possibilities given by technology** are key aspects while running a digital transformation process in the company. **IT Strategy Workshop gives an opportunity for reflection and looking at a project from a broader perspective** before working on a solution even starts.

Daria Polończyk

Head of Analysis & Design

Discovery Workshop

Evaluate, design and plan your project with experts. **Make better business decisions** and get a detailed technical roadmap.

Our Discovery Workshop is a process that will not only help **crystallise your vision** but also ensure its perfect **adjustment to your business objectives** and customers' needs.

It has proven to be extremely helpful in terms of finding the right solutions, planning new features as well as setting objectives.

Discovery Workshop helps to **define client's business goals, analyse the project's background, the ecosystem that a client operates in as well as processes** that take place within the organisation. Thanks to defining high-level requirements and scope of the project **you can plan and estimate its cost without the need to invest in a detailed specification** at the early stage.

Celina Cieřła

Lead Business Analyst

Design Sprint

Create and evaluate your product together with end users before the development even starts. **All this in just 5 days.**

Design Sprint is an intensive workshop that will let you compress months of endless debate into a single week. Define your idea, let it be evaluated by experts, turned into a prototype and tested with end-users.

No matter what stage of development you are in - **Design Sprint will let you quickly develop new paths for your product or improve already existing ones.**

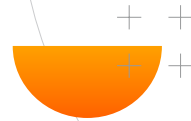

Due to Design Sprint's specifics, it is **crucial to include key stakeholders, decision-makers** as well as a few potential product's users in the process.

The involvement of the Analysis and Design team in the process of designing a solution varies accordingly to clients' needs. **Their close cooperation is the best choice** while working on a dynamic project as all the decisions can be based on discussions with specialists. It works best when the aim is to **quickly create and evaluate the solution's concept.**

Daniel Jaros

Lead UX Designer

Software Audits

Ensure your system is developed with respect to industry standards and **protects the future of your businesses' most valuable assets.**

We are a tech company with **20 years of experience** in creating and improving existing software. Over that time, we have gathered expert knowledge to run **security, quality and usability** audits of existing solutions.

Basing on your current needs, we can provide your organisation with specialised audits of three types:

- Quality Audits
- Security Audits
- Usability & accessibility audits

Sometimes you have to step back and look at the bigger picture. It may reveal that the problems you are facing now are caused by inadequate system design or the fact that your business development plans are not aligned with capability to deliver required changes on time. **It is very important to understand how your software is aligned with the plans you have.**

Our focus is **to deliver**

Working with Future Processing with the Analysis&Design team has really **made a difference to the end product** delivered to our customers.

(...) Being able to **present a prototype to our customers at different stages** allowed us to confirm with customers that the product was fit for the purpose.

(...) they helped and challenged us in the early stages of the process to ensure that we fully thought through the project, and helped to **identify key functionality**.

Sarah Owers

Business Manager, Allocate Software

Future Processing possesses professional resources in terms of high-quality specialists in the fields of **business process analysis** and establishing **user requirements**.

Based on our personal experience with Future Processing we would highly recommend it as **a solid partner** to implement any IT/software services.

Laurence Wells

Director of Products, Four Eyes Insights Ltd.
