

Post M&A Systems Merge Framework

Advise

Current state analysis

- Business objectives and merge challenges identification
- Current systems, data,
 products, and their functions
 audit
- Compliance requirements gathering

Planning & design

- Analysis of the systems merge impact on cost optimisation
- Visual layer design
- **Data structure** changes design
- Technical architecture design
- Optimisations and modifications of **business processes** design
- **Action plan** development and presentation
- Resources and budget identification

Implementation

Build

- Data and functionalities migration
- Data harmonisation and integration
- New system implementation

Launch

 Implementation of a merged system into the production environment

Testing

Testing

Requirements

verification

Compliance and cost reduction evaluation

Run

Maintenance and support

System monitoring
