

## Our client

### Problem

---

The issue was processing enormous amount of data for reliable decision making and being able to operate seamlessly with all databases and systems up to standard.

*“Our business segment is growing globally and we need technology to support the growth. We are developing a configurable platform to deploy in multiple countries. To scale up the program, we partnered with Future Processing to work with our teams.”*

**Director of Engineering**  
Fortune 100 Insurance Company

### Solution

---

We delivered business and technology consulting services to deliver cutting-edge technological solutions, including creating a new, state-of-the-art and secure data warehouse in AWS Redshift, switching from on-premises Data Source Systems to AWS Cloud and ultimately to AWS Data Lake, support in designing new architecture, transforming one, monolithic application into a distributed, serverless system, and more.

Through a close partnership with the client’s internal team, we continue to deliver a smooth flow of data and actively participate in designing new architecture.

### Result

---

The client can now manage their business more effectively thanks to a global application and data warehouse management, Cloud-based solutions and the enablement of on-prem to serverless system transformation.

*“I am most impressed by the professionalism and the quality of the team. They took the time to absorb and understand our business and technology landscape, which made them contribute quickly as a partner. People in every role bring their A-game.”*
